

## REVA PETHE

pethe.r@northeastern.edu | 857-300-0698 | [LinkedIn](#) | Boston, MA

### PROFESSIONAL SUMMARY

Data Analyst with hands-on experience transforming complex datasets into actionable business insights through SQL, Python, and Power BI. Skilled in KPI development, dashboard reporting, and trend analysis to support data-driven decision-making

### EDUCATION

**Northeastern University, Boston, MA**

Sep 2024 – Apr 2026

#### Masters in Information Systems

Coursework: Data Management and Database Design, Application Engineering and Development, Business Analytics, Web Design and User Experience, Algorithms, Data Science

### TECHNICAL SKILLS

**Programming Languages :** SQL (Advanced), Python, R, JavaScript, Java, HTML, CSS

**Data Analysis & Visualization :** Power BI, Tableau, Advanced Excel (Pivot Tables, Power Query, VLOOKUP), Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Plotly, Jupyter Notebook

**Databases :** MySQL, PostgreSQL, SQL Server (SSMS), Snowflake, MongoDB, Database Design, Data Warehousing

**Cloud Technologies:** AWS (Glue, S3), Snowflake, Docker, Databricks, ETL Pipeline Development, Apache Airflow, CI/CD

**Core Competencies:** Business Intelligence, Data Visualization, Data Modeling, Statistical Analysis

### PROFESSIONAL EXPERIENCE

**MindShare | Data Analyst and SAP Intern | Boston, MA**

Jan 2026 – Present

- Developed a voice-enabled analytics solution using Python and NLP to capture and process real-time audio inputs, converting speech into structured data for downstream analysis and reporting use cases
- Built scalable data pipelines using Python and SQL to ingest, clean, and transform unstructured audio and system data into analysis-ready datasets, supporting exploratory data analysis (EDA) and business insights
- Performed data preprocessing, feature extraction, and trend analysis on audio interaction data, improving command recognition accuracy and enabling more reliable user behavior analytics
- Designed and implemented backend services and RESTful APIs to integrate data workflows and analytics systems, enabling real-time data processing and seamless access to insights across applications
- Implemented data validation, logging, and performance monitoring frameworks to ensure data quality, track KPIs, and generate actionable insights for continuous improvement of system performance

**Symbiosis | Data Analyst**

May 2023 – Jun 2024

- Built and maintained ETL workflows using Python and SQL on AWS (S3, Glue) to collect, clean, and transform large-scale datasets into structured formats for reporting and analysis
- Designed and optimized relational data models (fact and dimension tables) in Snowflake to support analytical queries, improving data accessibility and reducing reporting latency by 20%
- Developed complex SQL queries (joins, CTEs, window functions) to perform data extraction, transformation, and analysis, enabling efficient reporting and deeper business insights
- Created interactive dashboards in Power BI with DAX measures and calculated columns to visualize KPIs and trends
- Collaborated with cross-functional teams to translate business requirements into data-driven solutions, delivering actionable insights and supporting strategic decision-making across departments

### KEY PROJECTS

**AI-Powered Payroll Analytics | [GitHub](#) | [Demo](#) | Python, PostgreSQL, ETL**

Feb 2026

- Analyzed USA & India payroll datasets using Python (Pandas) and SQL to uncover salary trends, department-level compensation gaps, and performance-based insights across 10,000+ employee records
- Built and optimized queries across PostgreSQL with automated ETL pipelines to segment workforce data with Excel reports
- Engineered an AI-powered natural language search engine using Python that converts plain-English queries into dynamic SQL, enabling self-service payroll analytics with zero manual data extraction

**Predictive Modeling of Healthcare Cost | [GitHub](#) | [Demo](#) | Python, Scikit-learn, Pandas, CI/CD**

Jan 2026

- Identified key cost drivers across 10,000+ patient records by analyzing demographic and clinical data, providing insights that could help healthcare providers allocate resources more effectively
- Built a predictive model achieving 89% accuracy, enabling proactive identification of high-cost patients before costs are incurred
- Deployed an interactive Streamlit dashboard for real-time cost predictions, automated via CI/CD pipelines

**US Masters Admission Prediction App | Random Forest, Excel, Power BI**

Sep 2024

- Analyzed 1,000+ applicant profiles in Excel to identify the factors most predictive of admission success, helping admissions counselors prioritize and evaluate candidates more efficiently
- Built Random Forest and Regression models with hyperparameter tuning, achieving 85% prediction accuracy
- Delivered analytical reports and dashboards using Power BI that reduced counselor decision time by 70%

### CERTIFICATIONS AND PUBLICATIONS

- Certifications:** Data Analytics (Google Cloud, Deloitte), SQL & Machine Learning (LinkedIn), Python Programming (Udemy)
- Publication:** "Ambition: US Masters Prediction Using Predictive Analytics" - METSZET Journal, Vol. 8, Issue 11, Nov 2024
